

DYNAFIT LAUNCHES A NEW ULTRARUNNING SHOE FOR SUMMER 2024

FROM TRAINING TO RACING: THE ULTRA PRO 2 FOR LONG, FREQUENT RUNS

Ultra When “long” gets even longer and “often” gets more often: DYNAFIT is introducing for summer 2024 the new Ultra Pro 2 ultrarunning shoe. With this light running shoe weighing just 310 grams, the mountain endurance brand is speaking primarily to committed ultrarunners who have regular, long workouts on their training plan.

Whether the big dream of that first ultra is approaching or as an experienced runner, you are looking to beat your time in the next race: If you train for these kinds of goals, you need a reliable companion that protects your joints and offers the best possible support. This is precisely where the Ultra Pro 2 excels as a shoe that combines perfect fit and superb comfort with outstanding grip. In development of the new Ultra Pro shoe, the footwear developers at DYNAFIT combined their designs with the wishes and experiences of the DYNAFIT Squad. To that end, the focus was on superior cushioning, stability and protection. In that way, not only are joints protected, but muscles can then also recover faster in order to be ready for several, longer workouts each week.

Paying particular attention to great cushioning, developers turned to the so-called Speedlite midsole for the Ultra Pro 2. It provides a springy, light running sensation. The unique material weighs 20 percent less than traditional EVA midsoles and has been conceived to absorb energy.

Long trail workouts hold the potential for injury if your concentration flags, so athletes need protection for their feet instead of counting every last gram of weight. For stability and additional protection of feet, the shoe integrates a toe cap and a padded nylon upper. Secure, firm hold as well as control and stability are also guaranteed by the anatomically correct heel construction. This construction significantly relieves strain on the Achilles tendon that can often be stressed on long runs.

The drop of 8 mm has particularly been tried-and-tested by committed ultrarunners. The Vibram® Megagrip sole, which is considered the ultimate benchmark on the race circuit, guarantees grip on varying off-road terrain.

In addition, the Ultra Pro 2 comes with the classic quick lacing system that can be adjusted with one hand to customize fit precisely. The shoes also come with traditional laces so you can select your preferred lacing system. The seamless tongue construction prevents pressure points. Laces can be stowed in a stretch fabric lace cover so you can avoid any trips or falls on the trails.

The Ultra Pro 2 will be available at retail in spring 2024 for both men and women, each in two colors.

Sizes	6 – 13 UK (men) / 3 – 9 UK (women)
Weight	310 g (UK 8))
Drop	8 mm
